

Exponentiation rapide :

```
begin
    for i := 1 to 10 step 1 do
        afficher(exp(2, i));
        newline() od
    where
    funct exp(x, n)  ≡
        ⌈z := 1;
        while n ≠ 0 do
            while pair(n) do
                n := n/2; x := x * x od;
                n := n - 1; z := z * x od;
            z];
    end
```
